The continuous vacuum stuffer **Risco RS205-80** is a compact and extremely versatile machine ideally suited for the small and medium processors. Incorporating the same size Risco long life product pump as our larger **RS305** line. The **RS205-80** provides large machine performance with the latest in drive and control technologies allows all aspects of the process to be programmed and stored. If space is limited, this is the machine of choice. Exacting portioning with the highest quality, in a machine that has the lowest cost of ownership in its class. This machine can be connected to a wide range of **Risco** accessories to meet any present and future production requirements.
