

# Biro AFMG-48 Heavy Mixer Grinder

## FEATURES:

7.5 HP motor and size 32 head can provide an output of over 65 lbs per minute. You get plenty of productivity without the need for a larger motor.

Separate auger and mixer motors mean no clutch to wear out or break. Your maintenance costs are much lower and your profits are higher.

Heavy duty roller link chain drive and tapered roller bearings minimize friction while providing the most simple, efficient, and low maintenance auger drive with no gear box to replace. Lower maintenance equal higher profits.

Heavy gauge stainless steel hopper, frame, and legs resist corrosion and damage. Your mixer grinder lasts longer which gives you a better return on your investment.

Power, durability, and low maintenance make the AFMG-48 the mixer grinder of choice for medium to large supermarkets and small to medium processors and HRI plants.

## SPECIFICATIONS:
